

08-0: **Priority Queue ADT**

Operations

- Add an element / key pair
- Return (and remove) element with smallest key

Keys are “priorities”, with smaller keys having a “better” priority

08-1: **Priority Queue ADT**

Operations

- Add an element / key pair
- Return (and remove) element with smallest key

Implementation:

- Sorted Array
 - Add Element
 - Remove Smallest Key

08-2: **Priority Queue ADT**

Operations

- Add an element / key pair
- Return (and remove) element with smallest key

Implementation:

- Sorted Array
 - Add Element $O(n)$
 - Remove Smallest Key $O(1)$
(using circular array)

08-3: **Priority Queue ADT**

Operations

- Add an element / key pair
- Return (and remove) element with smallest key

Implementation:

- Binary Search Tree
 - Add Element
 - Remove Smallest Key

08-4: **Priority Queue ADT**

Operations

- Add an element / key pair
- Return (and remove) element with smallest key

Implementation:

- Binary Search Tree

Add Element $O(\lg n)$

Remove Smallest Key $O(\lg n)$

If the tree is balanced

08-5: Priority Queue ADT

Operations

- Add an element / key pair
- Return (and remove) element with smallest key

Implementation:

- Binary Search Tree

Add Element $O(n)$

Remove Smallest Key $O(n)$

Computer Scientists are Pessimists

(Murphy was right)

08-6: Heap Definition

- Complete Binary Tree
- Heap Property
 - For every subtree in a tree, each value in the subtree is \geq value stored at the root of the subtree

08-7: Heap Examples

Valid Heap

08-8: Heap Examples

**08-9: Heap Insert**

- What is the only place we can insert an element in a heap, and maintain the complete binary tree property?

08-10: Heap Insert

- What is the only place we can insert an element in a heap, and maintain the complete binary tree property?
 - “End” of the tree – as a child of the shallowest leaf that is farthest to the left
 - Will the resulting tree still be a heap?

08-11: Heap Insert

- What is the only place we can insert an element in a heap, and maintain the complete binary tree property?
 - “End” of the tree – as a child of the shallowest leaf that is farthest to the left
- Inserting an element at the “end” of the heap may break the heap property
 - Swap the value up the tree (examples)

08-12: Heap Insert

- Running time for Insert?

08-13: Heap Insert

- Running time for Insert?
 - Place element at end of tree: $O(1)$ (We’ll see a clever way to find the “end” of the tree in a bit)
 - Swap element up the tree: $O(\text{height of tree})$ (Worst case, swap all the way up to the root)
 - Height of a Complete Binary Tree with n nodes?

08-14: Heap Insert

- Running time for Insert?

- Place element at end of tree: $O(1)$ (We'll see a clever way to find the "end" of the tree in a bit)
- Swap element up the tree: $O(\text{height of tree})$ (Worst case, swap all the way up to the root)
 - Height of a Complete Binary Tree with n nodes = $\Theta(\lg n)$
- Total running time: $\Theta(\lg n)$ in the worst case

08-15: Heap Remove Smallest

- Finding the smallest element is easy – at the root of the tree
- Removing the Root of the heap is hard
- What element is easy to remove? How could this help us?

08-16: Heap Remove Smallest

- Finding the smallest element is easy – at the root of the tree
- Removing the Root of the heap is hard
- Removing the element at the "end" of the heap is easy
 - Copy last element of heap into root
 - Remove the last element
 - Problem?

08-17: Heap Remove Smallest

- Finding the smallest element is easy – at the root of the tree
- Removing the Root of the heap is hard
- Removing the element at the "end" of the heap is easy
 - Copy last element of heap into root
 - Remove the last element
 - May break the heap property

08-18: Heap Remove Smallest

- Finding the smallest element is easy – at the root of the tree
- Removing the Root of the heap is hard
- Removing the element at the "end" of the heap is easy
 - Copy last element of heap into root
 - Remove the last element
 - Push the root down, until heap property is satisfied

08-19: Heap Remove Smallest

- Running time for remove smallest?

08-20: Heap Remove Smallest

- Running time for remove smallest?
 - Copy last element into root, remove last element: $O(1)$, given a $O(1)$ time method to find the last element
 - Push the root down: $O(\text{height of the tree})$ (Worst case, push element all the way down)
 - As before, Complete Binary Tree with n elements has height $\Theta(\lg n)$
- Total time: $\Theta(\lg n)$ in the worst case

08-21: **Representing Heaps**

- Represent heaps using pointers, much like BSTs
 - Need to add parent pointers for insert to work correctly
 - Need to maintain a pointer to the location to insert the next element (this could be hard to update & maintain)
 - Space needed to store pointers – 3 per node – could be greater than the space need to store the data in the heap!
 - Memory allocation and deallocation is slow
- There is a better way!

08-22: **Representing Heaps**

A Complete Binary Tree can be stored in an array:

08-23: **CBTs as Arrays**

- The root is stored at index 1
- For the node stored at index i :
 - Left child is stored at index $2 * i$
 - Right child is stored at index $2 * i + 1$
 - Parent is stored at index $\lfloor i/2 \rfloor$

08-24: **CBTs as Arrays**

Finding the parent of a node

```
int parent(int n) {
    return (n / 2);
}
```

Finding the left child of a node

```
int leftchild(int n) {
    return 2 * n;
}
```

Finding the right child of a node

```
int rightchild(int n) {
    return 2 * n + 1;
}
```

08-25: **Building a Heap**

Build a heap out of n elements

08-26: **Building a Heap**

Build a heap out of n elements

- Start with an empty heap
- Do n insertions into the heap

```
MinHeap H = new MinHeap();
for(i=0 < i<A.size(); i++)
    H.insert(A[i]);
```

Running time?

08-27: **Building a Heap**

Build a heap out of n elements

- Start with an empty heap
- Do n insertions into the heap

```
MinHeap H = new MinHeap();
for(i=0 < i<A.size(); i++)
    H.insert(A[i]);
```

Running time? $O(n \lg n)$ – is this bound tight?

08-28: **Building a Heap** Total time: $c_1 + \sum_{i=1}^n c_2 \lg i$

$$\begin{aligned}
 c_1 + \sum_{i=1}^n c_2 \lg i &\geq \sum_{i=n/2}^n c_2 \lg i \\
 &\geq \sum_{i=n/2}^n c_2 \lg(n/2) \\
 &= (n/2) c_2 \lg(n/2) \\
 &= (n/2) c_2 ((\lg n) - 1) \\
 &\in \Omega(n \lg n)
 \end{aligned}$$

Running Time: $\Theta(n \lg n)$

08-29: **Building a Heap**

Build a heap from the bottom up

- Place elements into a heap array
- Each leaf is a legal heap
- First potential problem is at location $\lfloor i/2 \rfloor$

08-30: **Building a Heap**

Build a heap from the bottom up

- Place elements into a heap array
- Each leaf is a legal heap
- First potential problem is at location $\lfloor i/2 \rfloor$

```
for (i=n/2; i>=0; i--)
    pushdown(i);
```

08-31: **Building a Heap**

How many swaps, worst case? If every pushdown has to swap all the way to a leaf:

$n/4$ elements	1 swap
$n/8$ elements	2 swaps
$n/16$ elements	3 swaps
$n/32$ elements	4 swaps

...

Total # of swaps:

$$n/4 + 2n/8 + 3n/16 + 4n/32 + \dots + (\lg n)n/n$$

08-32: **Decreasing a Key**

- Given a specific element in a heap, how can we decrease the key of that element, and maintain the heap property?
 - Examples

08-33: **Decreasing a Key**

- Given a specific element in a heap, how can we decrease the key of that element, and maintain the heap property?
 - Examples
- Push the element up the tree, just like after an insert
 - Examples

08-34: **Decreasing a Key**

- Decrease the key of a specific element in a heap:
 - Decrease the key value
 - Push the element up the tree, just like after an insert

- Time required?

08-35: Decreasing a Key

- Decrease the key of a specific element in a heap:
 - Decrease the key value
 - Push the element up the tree, just like after an insert
- Time required: $\Theta(\lg n)$, in the worst case.

08-36: Removing an Element

- Given a specific element in a heap, how can we remove that element, and maintain the heap property?
 - Examples

08-37: Removing an Element

- Given a specific element in a heap, how can we remove that element, and maintain the heap property?
 - Examples
- Decrease key to a value $<$ root
- Remove smallest element

08-38: Removing an Element

- Given a specific element in a heap, how can we remove that element, and maintain the heap property?
 - Examples
- Decrease key to a value $<$ root. Time $\Theta(\lg n)$ worst case
- Remove smallest element. Time $\Theta(\lg n)$ worst case

08-39: Java Specifics

- When inserting an element, push value up until it reaches the root, or it's \geq its parent
 - Our while statement will have two tests
- We can insert a *sentinel* value at index 0, guaranteed to be \leq any element in the heap
 - Now our while loop only requires a single test
