

15-0: **Graphs**

- A graph consists of:
  - A set of **nodes** or **vertices** (terms are interchangeable)
  - A set of **edges** or **arcs** (terms are interchangeable)
- Edges in graph can be either directed or undirected

15-1: **Graphs & Edges**

- Edges can be labeled or unlabeled
  - Edge labels are typically the *cost* associated with an edge
  - e.g., Nodes are cities, edges are roads between cities, edge label is the length of road

15-2: **Graph Problems**

- There are several problems that are “naturally” graph problems
  - Networking problems
  - Route planning
  - etc
- Problems that don’t *seem* like graph problems can also be solved with graphs
  - Register allocation using graph coloring

15-3: **Connected Undirected Graph**

- Path from every node to every other node

- Connected

15-4: **Connected Undirected Graph**

- Path from every node to every other node

- Connected

#### 15-5: Connected Undirected Graph

- Path from every node to every other node

- *Not* Connected

#### 15-6: Strongly Connected Graph

- Directed Path from every node to every other node

- Strongly Connected

#### 15-7: Strongly Connected Graph

- Directed Path from every node to every other node

- Strongly Connected

15-8: **Strongly Connected Graph**

- Directed Path from every node to every other node

- Not Strongly Connected

15-9: **Weakly Connected Graph**

- Directed graph w/ connected backbone

- Weakly Connected

## 15-10: Cycles in Graphs

- Undirected cycles

- Contains an undirected cycle

## 15-11: Cycles in Graphs

- Undirected cycles

- Contains an undirected cycle

## 15-12: Cycles in Graphs

- Undirected cycles

- Contains *no* undirected cycle

## 15-13: Cycles in Graphs

- Undirected cycles

- Contains *no* undirected cycle

## 15-14: Cycles in Graphs

- Directed cycles

- Contains a directed cycle

## 15-15: Cycles in Graphs

- Directed cycles

- Contains a directed cycle

## 15-16: Cycles in Graphs

- Directed cycles

- Contains a directed cycle

## 15-17: Cycles in Graphs

- Directed cycles

- Contains *no* directed cycle

## 15-18: Cycles &amp; Connectivity

- Must a connected, undirected graph contain a cycle?

## 15-19: Cycles &amp; Connectivity

- Must a connected, undirected graph contain a cycle?
  - No.
- Can an unconnected, undirected graph contain a cycle?

## 15-20: Cycles &amp; Connectivity

- Must a connected, undirected graph contain a cycle?
  - No.
- Can an unconnected, undirected graph contain a cycle?
  - Yes.
- Must a strongly connected graph contain a cycle?

**15-21: Cycles & Connectivity**

- Must a connected, undirected graph contain a cycle?
  - No.
- Can an unconnected, undirected graph contain a cycle?
  - Yes.
- Must a strongly connected graph contain a cycle?
  - Yes! (why?)

**15-22: Cycles & Connectivity**

- If a graph is weakly connected, and contains a cycle, must it be strongly connected?

**15-23: Cycles & Connectivity**

- If a graph is weakly connected, and contains a cycle, must it be strongly connected?
  - No.

**15-24: Cycles & Connectivity**

- If a graph is weakly connected, and contains a cycle, must it be strongly connected?
  - No.
- If a graph contains a cycle which contains all nodes, must the graph be strongly connected?

**15-25: Cycles & Connectivity**

- If a graph is weakly connected, and contains a cycle, must it be strongly connected?
  - No.
- If a graph contains a cycle which contains all nodes, must the graph be strongly connected?
  - Yes. (why?)

**15-26: Graph Representations**

- Adjacency Matrix
- Represent a graph with a two-dimensional array  $G$ 
  - $G[i][j] = 1$  if there is an edge from node  $i$  to node  $j$

- $G[i][j] = 0$  if there is no edge from node  $i$  to node  $j$
- If graph is undirected, matrix is symmetric
- Can represent edges labeled with a cost as well:
  - $G[i][j] = \text{cost of link between } i \text{ and } j$
  - If there is no direct link,  $G[i][j] = \infty$

## 15-27: Adjacency Matrix

- Examples:

## 15-28: Adjacency Matrix

- Examples:

## 15-29: Adjacency Matrix

- Examples:

## 15-30: Adjacency Matrix

- Examples:

## 15-31: Graph Representations

- Adjacency List
- Maintain a linked-list of the neighbors of every vertex.
  - $n$  vertices
  - Array of  $n$  lists, one per vertex
  - Each list  $i$  contains a list of all vertices adjacent to  $i$ .

## 15-32: Adjacency List

- Examples:

## 15-33: Adjacency List

- Examples:

- Note – lists are not always sorted

**15-34: Sparse vs. Dense**

- Sparse graph – relatively few edges
- Dense graph – lots of edges
- Complete graph – contains all possible edges
  - These terms are fuzzy. “Sparse” in one context may or may not be “sparse” in a different context

**15-35: Nodes with Labels**

- If nodes are labeled with strings instead of integers
  - Internally, nodes are still represented as integers
  - Need to associate string labels & vertex numbers
    - Vertex number  $\rightarrow$  label
    - Label  $\rightarrow$  vertex number

**15-36: Nodes with Labels**

- Vertex numbers  $\rightarrow$  labels

**15-37: Nodes with Labels**

- Vertex numbers  $\rightarrow$  labels
  - Array
    - Vertex numbers are indices into array
    - Data in array is string label

**15-38: Nodes with Labels**

- Labels  $\rightarrow$  vertex numbers

**15-39: Nodes with Labels**

- Labels  $\rightarrow$  vertex numbers
  - Use a hash table
    - Key is the vertex label
    - Data is vertex number

**Examples! 15-40: Topological Sort**

- Directed Acyclic Graph, Vertices  $v_1 \dots v_n$
- Create an ordering of the vertices
  - If there a path from  $v_i$  to  $v_j$ , then  $v_i$  appears before  $v_j$  in the ordering
- Example: Prerequisite chains

15-41: **Topological Sort**

- Which node(s) could be first in the topological ordering?

15-42: **Topological Sort**

- Which node(s) could be first in the topological ordering?
  - Node with no incident (incoming) edges

15-43: **Topological Sort**

- Pick a node  $v_k$  with no incident edges
- Add  $v_k$  to the ordering
- Remove  $v_k$  and all edges from  $v_k$  from the graph
- Repeat until all nodes are picked.

15-44: **Topological Sort**

- How can we find a node with no incident edges?
- Count the incident edges of all nodes

15-45: **Topological Sort**

```
for (i=0; i < NumberOfVertices; i++)
    NumIncident[i] = 0;

for(i=0; i < NumberOfVertices; i++)
    each node k adjacent to i
        NumIncident[k]++
```

15-46: **Topological Sort**

```
for(i=0; i < NumberOfVertices; i++)
    NumIncident[i] = 0;

for(i=0; i < NumberOfVertices; i++)
    for(tmp=G[i]; tmp != null; tmp=tmp.next())
        NumIncident[tmp.neighbor()]++
```

15-47: **Topological Sort**

- Create NumIncident array
- Repeat
  - Search through NumIncident to find a vertex  $v$  with  $\text{NumIncident}[v] == 0$
  - Add  $v$  to the ordering
  - Decrement NumIncident of all neighbors of  $v$
  - Set  $\text{NumIncident}[v] = -1$

- Until all vertices have been picked

**15-48: Topological Sort**

- In a graph with  $V$  vertices and  $E$  edges, how long does this version of topological sort take?

**15-49: Topological Sort**

- In a graph with  $V$  vertices and  $E$  edges, how long does this version of topological sort take?
  - $\Theta(V^2 + E) = \Theta(V^2)$ 
    - Since  $E \in O(V^2)$

**15-50: Topological Sort**

- Where are we spending “extra” time

**15-51: Topological Sort**

- Where are we spending “extra” time
  - Searching through NumIncident each time looking for a vertex with no incident edges
  - Keep around a set of all nodes with no incident edges
  - Remove an element  $v$  from this set, and add it to the ordering
  - Decrement NumIncident for all neighbors of  $v$ 
    - If NumIncident[ $k$ ] is decremented to 0, add  $k$  to the set.
  - How do we implement the set of nodes with no incident edges?

**15-52: Topological Sort**

- Where are we spending “extra” time
  - Searching through NumIncident each time looking for a vertex with no incident edges
  - Keep around a set of all nodes with no incident edges
  - Remove an element  $v$  from this set, and add it to the ordering
  - Decrement NumIncident for all neighbors of  $v$ 
    - If NumIncident[ $k$ ] is decremented to 0, add  $k$  to the set.
  - How do we implement the set of nodes with no incident edges?
    - Use a stack

**15-53: Topological Sort**

- Examples!!
  - Graph
  - Adjacency List
  - NumIncident
  - Stack
